

crane management system

Executive Board's preamble

Passion for crane

A total crane management solution providing timely scheduling and reliable management

Our core business is providing safe, cost-effective solutions for the running of your cranes and lifting equipment, enabling you to concentrate on your core business.

From inception to completion we have the resources, facilities and experience. Whether you are:

- * developing a concept or working up a detailed design;
- * procuring new equipment or operating and maintaining what you already have;
- * modifying and upgrading to meet life of field expectations or decommissioning,

You need to trust a service provider that is lifting-focused, where you are around the world and competent to meet your high standards: that service provider is JERANEAS.

Executive Board's preamble

Mission Statement

JERANEAS will continuously improve to be the best heavy lift and heavy transport company.

Core Values

Safety – JERANEAS. will invest the time and money necessary to insure the safety of our employees, customers, vendors, and the general public. We will further protect property and the environment

Quality Service – JERANEAS. will train our employees and monitor our processes to insure consistent excellence and an appropriate effort to meet the needs of our customers.

Innovation – JERANEAS. will be proactive in creating better methods and tools to meet the needs of our customers

Continuous Improvement – JERANEAS. will evaluate and critique all areas of our company with an eye for improvement

Fairness – JERANEAS. will strive to be honest and fair to all employees, vendors and customers.

Profit with a Purpose – JERANEAS will attempt to make profit and will invest the profit to expand the company and to meet the needs of others (physically, mentally, spiritually).

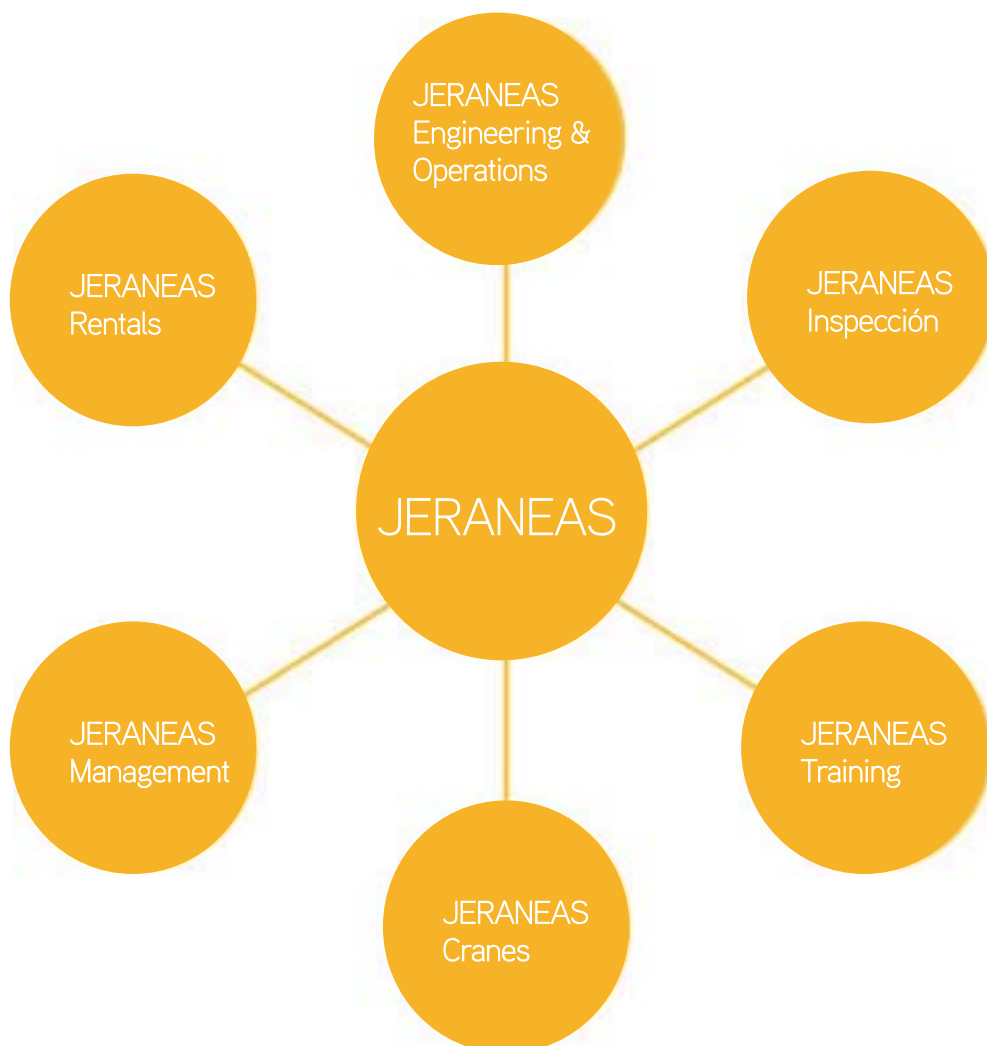

JERANEAS at a glance

Passion for crane

Raising Standards in Technology and Service

JERANEAS is a global provider of crane management services, specialising in onshore lifting, crane engineering and services, mechanical handling, pipe and cable lay-systems, equipment rentals and competence training.

We service these six market sectors through six dedicated divisions – with the ability of drawing on all our resources to deliver integrated services when needed.

Crane and lifting equipment operation

JERANEAS at a glance

Overview

Development and implementation of wind farm projects in SPAIN and abroad, both onshore

- Core competence: development, project planning, implementation of wind farms
- Sale with after-sales technical and commercial support service
- Operation of wind farms
- Company based in Guadalajara SPAIN.

Crane and lifting equipment management

JERANEAS at a glance

Installed capacity

JERANEAS is a firm started by crane industry professionals having a cumulative experience of almost 20 years in this industry. We have worked in different areas of the industry and have rich and proven experience of working in various parts of the world. As you are aware, wind industry has been growing at a rapid rate for last 10 years or so.

Since foundation in 2003 development of onshore wind farms

- More 4,000 MW installed
- JERANEAS is therefore one of the most experienced wind power developers –worldwide!

Extensive know-how upon erection of wind farms all over SPAIN

- Long-term partner for wind farm operators with comprehensive network to decision makers
- Trustful cooperation with leading manufacturers such as GAMESA, Acciona, Vestas, GE, MATORRES.

Market and strategy

Outsourcing

“Outsource to the Expert”

The long experience and deep understanding of crane and lifting equipment operation and maintenance held by JERANEAS has allowed the development of a management system whereby responsibility for equipment is effectively passed to JERANEAS.

Core crew crane operation, maintenance and rigging personnel are deployed with full management and technical support from dedicated Contract Managers and Contract Support Engineers (CSE). The CSE acts as Focal Point for all crane and lifting equipment matters, prepares an annual activity plan and budget, takes responsibility for ensuring that maintenance is completed, that personnel competence is assured, procures spares, maintains stock and submits regular reports. In addition, the CSE can manage fixed and loose lifting equipment examinations and review and approve lift plans. If required, the CSE can call upon and manages additional JERANEAS Design and Project engineering support.

Key Performance Indicators are used to measure compliance with our client expectations in safety, integrity and cost control – and such KPIs form the driver to superior performance through linking to profit incentive schemes.

By outsourcing management of cranes and lifting equipment our clients can concentrate on doing what they do best – industrial, oil and gas refinery and Wind farms– knowing that their cranes and lifting equipment are in the hands of a company that they can trust to deliver safe, efficient and cost effective services to meet their business drivers over the long term.

Successful in the market since 2003

Solutions

Crane management system

“Undeniable value”

Whether a project is at the field development or decommissioning stage, if cranes, lifting equipment or handling schemes are involved then JERANEAS is your ideal provider of specialist lifting Engineering services covering design, fabrication project management and implementation.

From drawing up and reviewing technical specifications to detailed structural analysis using finite elements, through 2-D and 3-D modelling to Failure Modes Effects and Criticality Analysis and maintenance strategies, manufacturing drawings and procedural walkthroughs, JERANEAS can engineer your project.

And once it's designed and built, you need a JERANEAS professional to engineer the safe implementation, by creating detailed plans and procedures resulting in cost effectiveness and minimising disruption.

Our range of expertise and depth of technical know how enables us to deliver value systematically to our clients whether there is:

- Need for a new crane to replace an old one or a reconditioned unit or upgrade what you have
- Need to source replacements for parts now obsolete; or
- A plan to cease production and clean the site, which requires cranes, be they fixed or temporary- and that's just cranes
- Demand to change a turbine, a compressor or a flare tip;
- Requirement for davits, beams, hoists, slings and shackles
